

ENVIRONMENTAL POLICY

RESPONSIBILITY

We recognise the environmental impact of our operations and take responsibility for preventing pollution. All our operations comply with relevant legislation, regulations and agreements, and requirements set by our own organisation.

CONTINUOUS IMPROVEMENT

We are continuously improving the impact of our environmental management system by analysing measured data and observations made by various actors. This forms the basis for preventive, systematic, and targeted environmental actions. It is important to us that our employees are aware of our environmental indicators and of the level at which our set targets are realised. We ensure this by regularly providing information to our staff.

We confirm our employees' competence and commitment through training, information, and internal and external monitoring. To mitigate the impact on the environment, we strive to make our employees aware of the environmental impact of their own work and operating methods right from their very first introduction training.

EFFICIENT USE OF RESOURCES

We use energy, water, raw materials, and other natural resources as efficiently as possible. Through our energy choices, we strive to reduce the carbon footprint of our production facilities, and all the electricity we use is produced using renewable forms of energy.

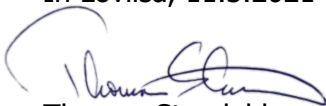

MINIMISING NEGATIVE IMPACT ON THE ENVIRONMENT

We continually strive to reduce the amount of waste created by our production. We do this by following the "Zero Error" principle for every process, by carefully sorting our waste, and through the optimal use of materials. We also systematically carry out risk assessments to reduce and prevent land, air and water pollution.

SUPPLIER COLLABORATION

We want our environmental values to be visible throughout our supply chain. That's why we also require our suppliers to operate in accordance with our environmental values. We assess suppliers' operating ability before approval, and regularly evaluate existing suppliers' compliance with our requirements.
